

# HOW TO INSTALL A GASKET

Install a new gasket by securing the gasket at all 4 corners first. Installing in a different manner may result in a gasket that is too long for the door.

When installing a screw-in type gasket leave all screws loose until the new gasket has been properly aligned with the door.

## GASKET MAINTENANCE

Wipe your gaskets clean regularly to remove excess food or liquid caught in between the gasket or spilled on the gasket. Only use a mild dish soap to wipe your gaskets clean. DO NOT use an abrasive cleaner to wipe your gaskets clean. Abrasive chemicals will cause break down of the gasket material.
